I am in receipt of your letter regarding the oil in the steam plant hot well. We sincerely regret the difficulties we have caused regarding this problem. The heavy rains during October with the addition of the volume of waste water from the interception of the street along side the boiler house and tank farm has caused us to intercept more water than the separator system was capable of handling. An additional pump has been added to alleviate the problem.

There is one item we have not yet been able to ascertain where the pipe or lead is into this hot well. We have sealed all the outlets from our separator that we understand could be causing the problem. We would appreciate the survey by the Port as to where this waste water may be entering your hot well system.

Again, I regret the difficulties we have caused.

Very truly yours,

CHEMICAL PROCESSORS, INC.
